Zavanti ERP Update Guide V13.1.0

This document is a guide to update an existing instance of Zavanti ERP to the latest released version(s)
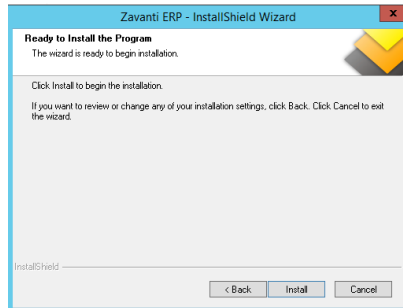

Pre-requisites

- Version 13.0.0 or later version 13 must be installed.

- Ensure your Zavanti database has been backed up prior to update

- Ensure you have a valid license key for the Zavanti ERP version you are installing. Please contact support@zavanti.com if you do not have a valid license key.

- Ensure you run this process from the Zavanti / SQLbase server machine with administrator user rights

- Downloaded and unzip the installation file as directed by Zavanti support.
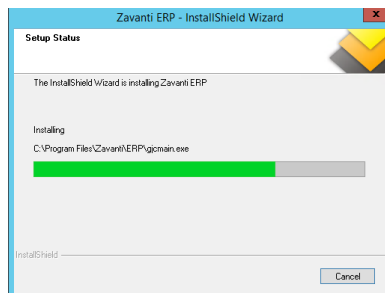

Backup the Database

- Make sure all users are logged out of Zavanti

- Stop Gupta (Unify) SQLBase
  - o Open Task Manager
  - o Select "Services" tab and look for SQLBase
  - o Highlight SQLBase line and right click
  - o Select "Stop"

- Back up the database folder (TSCFIN)
  - o Locate folder, generally under c:/gupta/TSCFIN
  - o Copy folder and paste in a backup location

- Restart the **Zavanti / SQLBase server**

Running the Update

1. Run the install and follow all prompts.
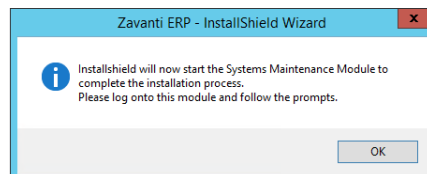

2. Press "Next" to begin installation

3. A 'Status' progress bar is displayed once the installation has commenced

4. Once complete, you will be prompted to 'Finish'

5. On completion of the install. you will be prompted to run the 'System Maintenance' module

6. Click 'OK' and Do not cancel

7. You may be prompted to enter a new license key.

8. Once complete all users can now log in to Zavanti ERP.
