

Zavanti ERP Upgrade Guide

V14.0.3

This document is a guide to update an existing instance of Zavanti ERP to the latest released version(s)

Pre-requisites

- Version 14.0.0 must be installed.
- Ensure your Zavanti database has been backed up prior to update.
- Ensure you run this process from the Zavanti / SQLBase server machine with administrator user rights.
- Downloaded and unzip the installation file as directed by Zavanti support.

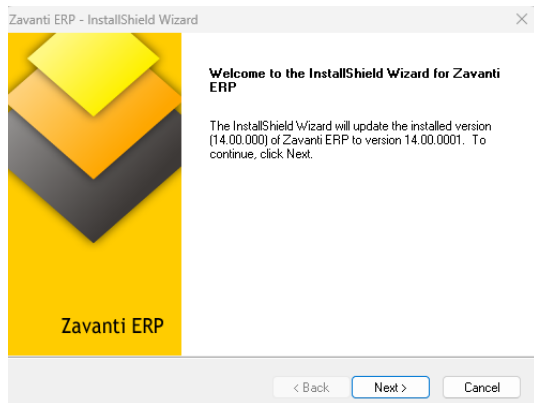

Backup the Database

Before commencing the update, please ensure that a current backup of your Zavanti database has been completed. If you have an established database backup procedure, please use your normal backup process or else follow the steps below to ensure your database can be restored if required.

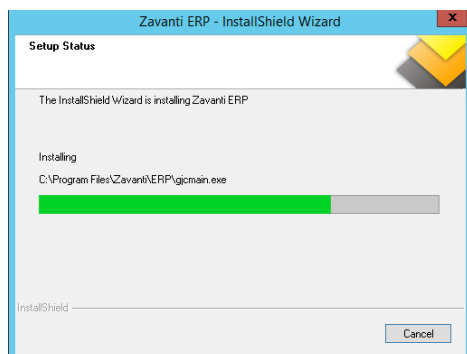

- Make sure all users are logged out of Zavanti
- Stop Gupta (Unify) SQLBase
 - Open Task Manager
 - Select “Services” tab and look for SQLBase
 - Highlight SQLBase line and right click
 - Select “Stop”
- Back up the database folder (TSCFIN)
 - Locate folder, generally under c:/gupta/TSCFIN
 - Copy folder and paste in a backup location
- Restart the **Zavanti / SQLBase server**

Running the Update

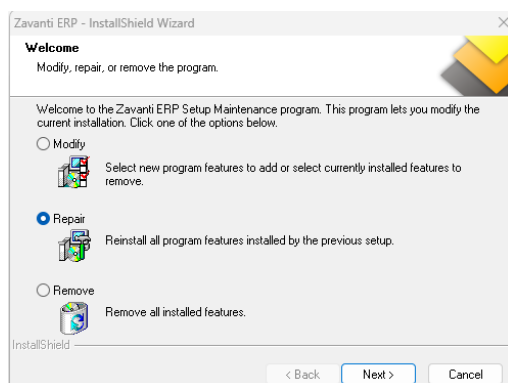

1. Run the install and follow all prompts.

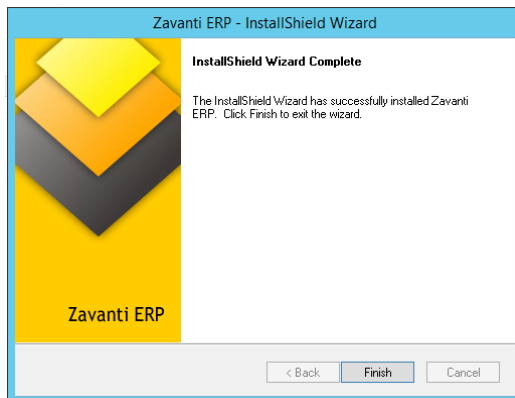

2. A 'Status' progress bar is displayed once the installation has commenced

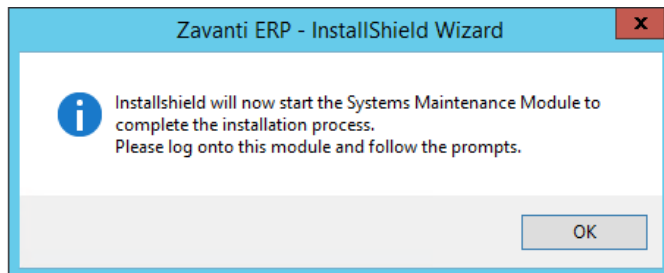

3. This step will only appear if you are re-running the update due to a previously incorrect installation of version 14.0.3, or if the 14.0.2 update has been completed
4. Select the REPAIR option to update the required executables and templates.

5. Once complete, you will be prompted to 'Finish'

6. On completion of the installation, you will be prompted to run the 'System Maintenance' module

7. This will update the database to the latest version
 8. Click 'OK'
 9. Once complete all users can now log in to Zavanti ERP.
